SUMMARY

Full-stack engineer (B.Tech CSE, 2024) who takes features from business requirements to production: PostgreSQL data models, validated APIs, React/Next.js interfaces, automated tests and deployment. 50+ builds shipped for client companies and remote teams, including a live EMI/payment portal, a multi-tenant ERP and a task platform released on web, Windows and Android from one codebase. Strongest where correctness matters: money movement, tenant isolation and access control.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, SQL, Python, C#
Frontend	React, Next.js (App Router), Tailwind CSS, Zustand, React Hook Form, Electron, Capacitor
Backend & APIs	Node.js, Next.js Route Handlers, REST API design, Zod validation, ASP.NET Core MVC, FastAPI
Data	PostgreSQL (schema design, Row-Level Security, migrations, triggers), Prisma ORM, Redis, AWS S3
Security	Multi-tenant isolation, role-based access control, OAuth (Google), bcrypt password hashing
Quality & Delivery	Vitest, Playwright, GitHub Actions CI, Docker, Kubernetes, Linux, Vercel, Git
Practice	Requirements analysis, system design, root-cause debugging, technical documentation

EXPERIENCE

Full-Stack Software Engineer — Freelance & Contract

2024 – Present

Client companies, startups and remote teams

Remote

- Own delivery from requirements to production for multi-tenant SaaS, payment and productivity products: data model, API, interface, tests and release.
- Model relational schemas and REST APIs on Node.js/Next.js and PostgreSQL, enforcing per-tenant isolation with Row-Level Security policies in the database rather than in UI code.
- Fixed production defects in payment flows: rewrote an approval route that intermittently returned invalid JSON and removed legacy triggers that could apply a payment twice.
- Guard releases with automated tests (Vitest, Playwright) for tenant isolation, access control and business rules.

Software Engineering Trainee (Industrial Training)

Sep 2023 – Nov 2023

Logicrack Infosystem Pvt. Ltd.

Kolkata

- Completed 10-week certified training in ASP.NET Core 6.0 MVC; built *Office CRM*, an internal customer and workflow application, covering relational schema, controllers and Razor views.

Web Development Trainee

2022

Webguru Technology — responsive interfaces, client-server fundamentals, UI component integration

Kolkata

SELECTED PROJECTS

TelePoint — EMI and payment collection portal

github.com/Biswadipgoj/telepoint · telepoint-topaz.vercel.app

Next.js · TypeScript · PostgreSQL · AWS S3 · jsPDF · Recharts

- Role-based dashboards for customers, retailers and admins; every write verifies record ownership server-side and returns 403 on cross-account access.
- Added a PARTIALLY_PAID state so EMI records keep paid and outstanding amounts instead of a binary paid flag.
- Made payment deletion reverse its EMI, fine and balance effects; added PDF receipts, QR-code payments and collection analytics.

Nexora — Projects and tasks on web, Windows and Android

github.com/Biswadipgoj/nexora · nexora-xi-rust.vercel.app

Next.js · TypeScript · React · PostgreSQL (RLS) · Electron · Capacitor · Vitest

- One Next.js codebase shipped as a web app, a Windows desktop app (Electron) and an Android app (Capacitor).
- Multi-tenant workspace model with Row-Level Security on every data-access path.
- 103 automated security tests covering tenant isolation, IDOR attempts and role hierarchy; GitHub Actions builds the Android APK in CI.

Erpixa — Modular ERP for small and mid-sized businesses

github.com/Biswadipgoj/Erpixa · erpixa.vercel.app

React · TypeScript · Vite · PostgreSQL (RLS) · Zustand

- Every record belongs to exactly one organization, enforced by PostgreSQL Row-Level Security so tenants cannot read each other's data.
- Onboarding enables only the modules a business needs (CRM, sales, inventory, accounting, HR, projects, manufacturing, helpdesk, marketing); Google sign-in.

Tripmate — Group trip expenses and settlements

github.com/Biswadipgoj/trip · tripmate.boats

Next.js · TypeScript · PostgreSQL (RLS) · Zustand

- Four split types (equal, amount, percentage, quantity) plus per-room allocation for shared stays.
- Greedy settlement algorithm that nets balances, including sponsored shares, into the fewest possible payments.
- UPI collection via QR codes and deep links, PDF trip reports, and an offline mode that works without the backend.

NanoLink — URL shortener with protected and expiring links

github.com/Biswadipgoj/nl · nanl.vercel.app

Next.js · TypeScript · Prisma · PostgreSQL · Zod · bcrypt

- API validates input with Zod, normalizes the URL, checks alias uniqueness, hashes optional passwords with bcrypt and returns 201.
- Short codes via nanoid, QR codes, expiry dates, click tracking and one-time links deactivated on first redirect.

Also: fine-tuned a customer-support LLM (Qwen2.5-3B-Instruct, QLoRA) served through FastAPI for a client engagement.

EDUCATION

B.Tech, Computer Science & Engineering — Brainware University, Kolkata

2021 – 2024

Diploma, Computer Science & Engineering — Brainware University, Kolkata

2018 – 2021

Secondary & Higher Secondary — Uluberia High School, West Bengal Board

2011 – 2018
