

Biswadip Goj

Full-Stack Software Engineer & Business Analyst

biswadipgoj@gmail.com | West Bengal, India

GitHub: Biswadipgoj | LinkedIn: biswadipgoj | biswadip.in

PROFILE

Full-stack software engineer & business analyst bridging business requirements, workflow modeling, relational schemas, and AI systems. Computer science graduate with independently built projects spanning business applications, URL shortening, payment workflows, collaboration and shared expenses.

TECHNICAL SKILLS

Business Analysis & Systems: Requirements Elicitation (BRD/PRD), Process Flow Modeling, Workflow & Domain Design, User Stories & Acceptance (UAT), System Boundaries

Core Languages: TypeScript, JavaScript, Python, SQL

Frontend & Frameworks: React, Next.js, Tailwind CSS, HTML5, CSS3

Backend & APIs: Node.js, REST APIs, FastAPI, Zod, Authentication (RBAC)

Databases & Storage: PostgreSQL, pgvector, Prisma ORM, MongoDB, Row-Level Security (RLS)

AI & Retrieval Systems: RAG Architecture, Hybrid Retrieval (BM25 + Vector), Cross-Encoder Reranking, QLoRA / Fine-Tuning, Model Evaluation (Ragas)

SELECTED PROJECTS

Erpixa | React / TypeScript / PostgreSQL / Vite

Multi-tenant business management application with organization-based access and modular workflows.

Membership records connect users to organizations and their roles.

[Live application](#) | [Source code](#)

NanoLink | Next.js / TypeScript / Node.js / PostgreSQL

URL shortener with custom links, passwords, expiry and click tracking.

The route validates the request, normalizes the URL and checks it before creating the record.

[Live application](#) | [Source code](#)

TelePoint | Next.js / TypeScript / PostgreSQL

EMI management and payment collection platform built from retail financial process analysis.

The API checks the user, active retailer record and PIN before processing the request.

[Live application](#) | [Source code](#)

Nexora | Next.js / TypeScript / React / Electron / Capacitor

Cross-platform workspace for projects and task management.

Next.js and React provide the application, with Electron for Windows and Capacitor for Android.

[Live application](#) | [Source code](#)

Tripmate | Next.js / React / TypeScript

Group expense management and settlement application.

The application uses member and expense information to calculate balances.
